UX / UI CASE STUDY

Coffee Day

Sweets & Coffee Ordering Application

A guest-first mobile app for ordering desserts and specialty coffee, from first idea to high-fidelity screens.

20 app screens | 65 varieties | Guest checkout

01 · OVERVIEW

Order sweets and coffee like it feels in the café

A guest-first mobile app for desserts and Civet coffee: browse, check out and track in a few taps.

> **Problem** Forced sign-ups, crowded menus and no order status.

> **Solution** Guest checkout, 13 clear categories and live tracking.

> **My role** End-to-end UI/UX: research, flows, brand and hi-fi screens.

02 · DESIGN PROCESS

Five phases, one loop

Each phase fed the next, from listening to testing.

Empathize and define Interviews, survey, competitors, personas, journey.

Ideate Brainstorm, flows, storyboard and paper sketches.

Design and test Brand, hi-fi screens and usability tasks.

03 · EMPATHIZE

Listening to customers and staff

Interviews with stakeholders and end users set the goals before any design began.

> **Interviews** 6–10 customers and 2–4 staff (planned).

> **Survey** 24 questions, 30–60 responses targeted.

> **Competitors** Swiggy, Zomato, Bakingo, Blue Tokai and Zepto rarely pair desserts with guest checkout.

04 · DEFINE · PERSONAS

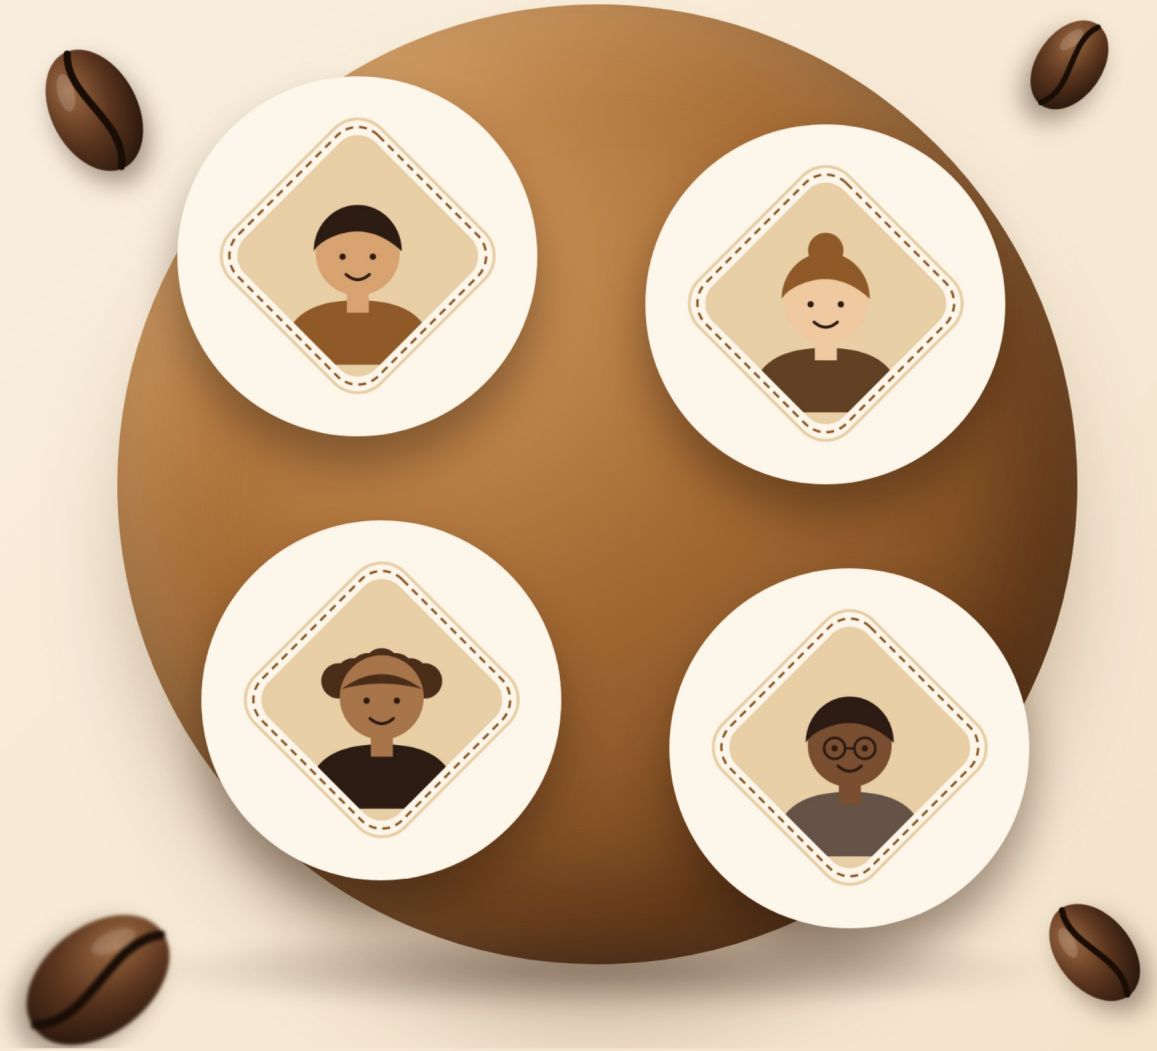

Four people, one simple promise

Personas and an empathy map show what each customer needs and feels.

> **Dessert explorer** Wants an easy, inspiring menu.

> **Occasion planner** Wants scheduled delivery and certainty.

> **Coffee buyer and order manager** Want the Civet story and a clear queue.

05 · DEFINE · JOURNEY

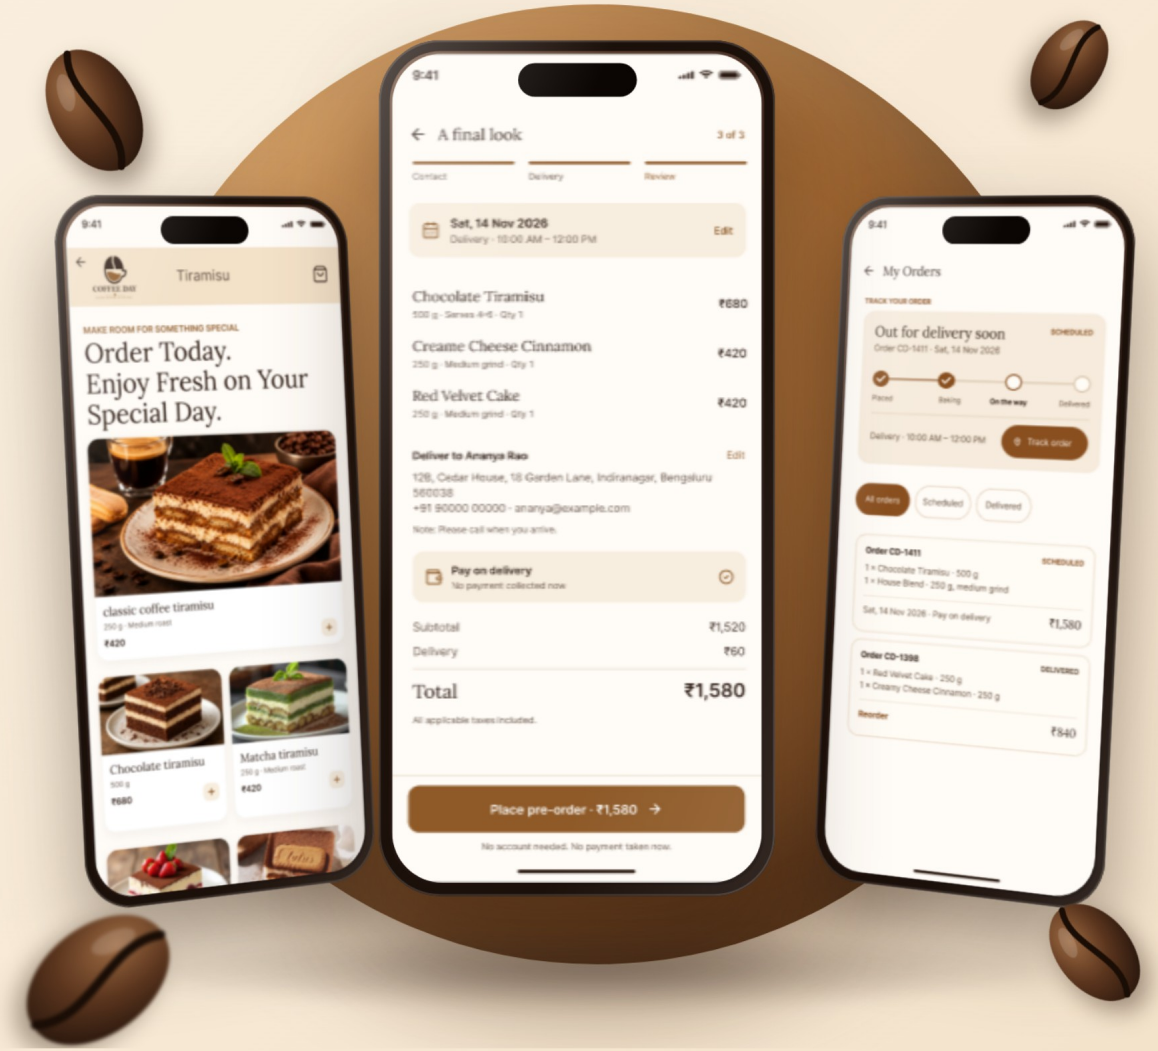

From craving to first bite

Five stages: discover, choose, check out, wait and enjoy.

> **Pain points** Forced sign-up, crowded menus, no updates.

> **Goals** Guest checkout, clear categories, visible tracking.

> **Structure** Welcome, Menu, Cart, Checkout, Orders, never more than three taps deep.

06 · IDEATE · USER FLOWS

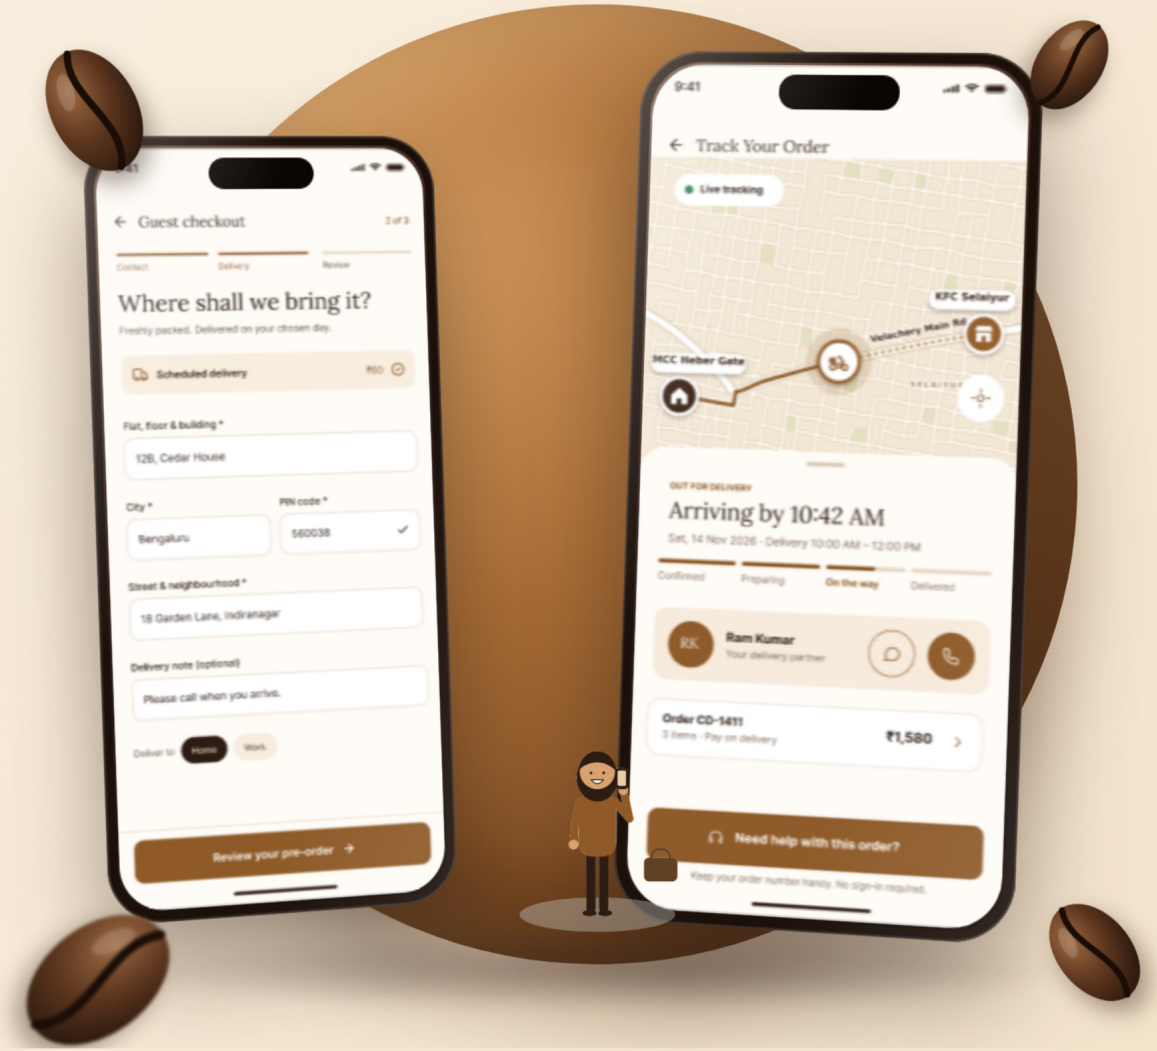

Both sides of one order

The customer path and the café path stay in sync.

> **Customer** Open app, pick items, cart, details, confirm, track.

> **Café staff** Order arrives, review, prepare, dispatch.

> **Result** Every status change shows on the customer's screen.

07 · IDEATE · STORY AND SKETCHES

From brainstorm to paper

Ideas were grouped, storyboarded and sketched before any pixels.

Brainstorm Affinity map: menu, checkout, tracking, brand.

Storyboard A craving, a few taps, a tracked order.

Paper prototype Quick sketches tested the flow cheaply.

08 · BRAND IDENTITY

A bean and a mug, one mark

Warm caramel and cream, with Lora for headings and Poppins for interface text.

Logo Bean plus mug forms the Coffee Day icon.

Palette Warm #F3E1C8, Caramel #8F5A28, Espresso #2D1C14.

Packaging One Civet box and four packs share the look.

09 · HI-FI · GUEST CHECKOUT

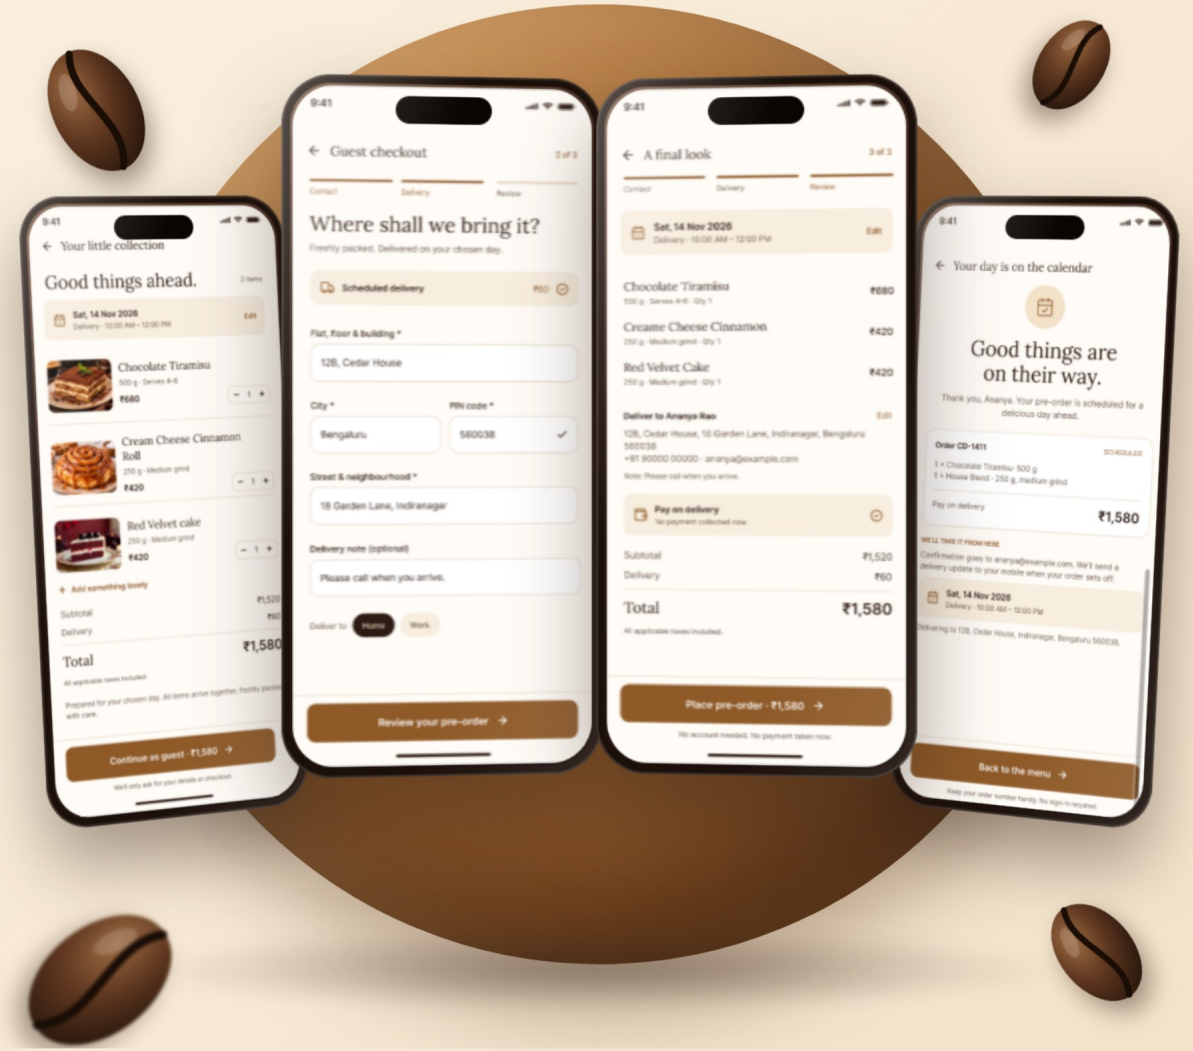

Five steps, no account

A splash and welcome screen set the tone, then checkout stays short.

Cart and contact Review items, then add contact details.

Delivery and review Choose delivery, then take a final look.

Confirmation A clear confirmation ends the flow.

10 · HI-FI · MENU

13 categories, 65 varieties

Every category uses one layout, so customers learn it once.

Civet coffee The featured collection sits up front.

Desserts Tiramisu, pancake, cake, cupcake and cookies.

More sweets Brownies, macarons, cheesecake and donuts.

11 · HI-FI · TRACKING

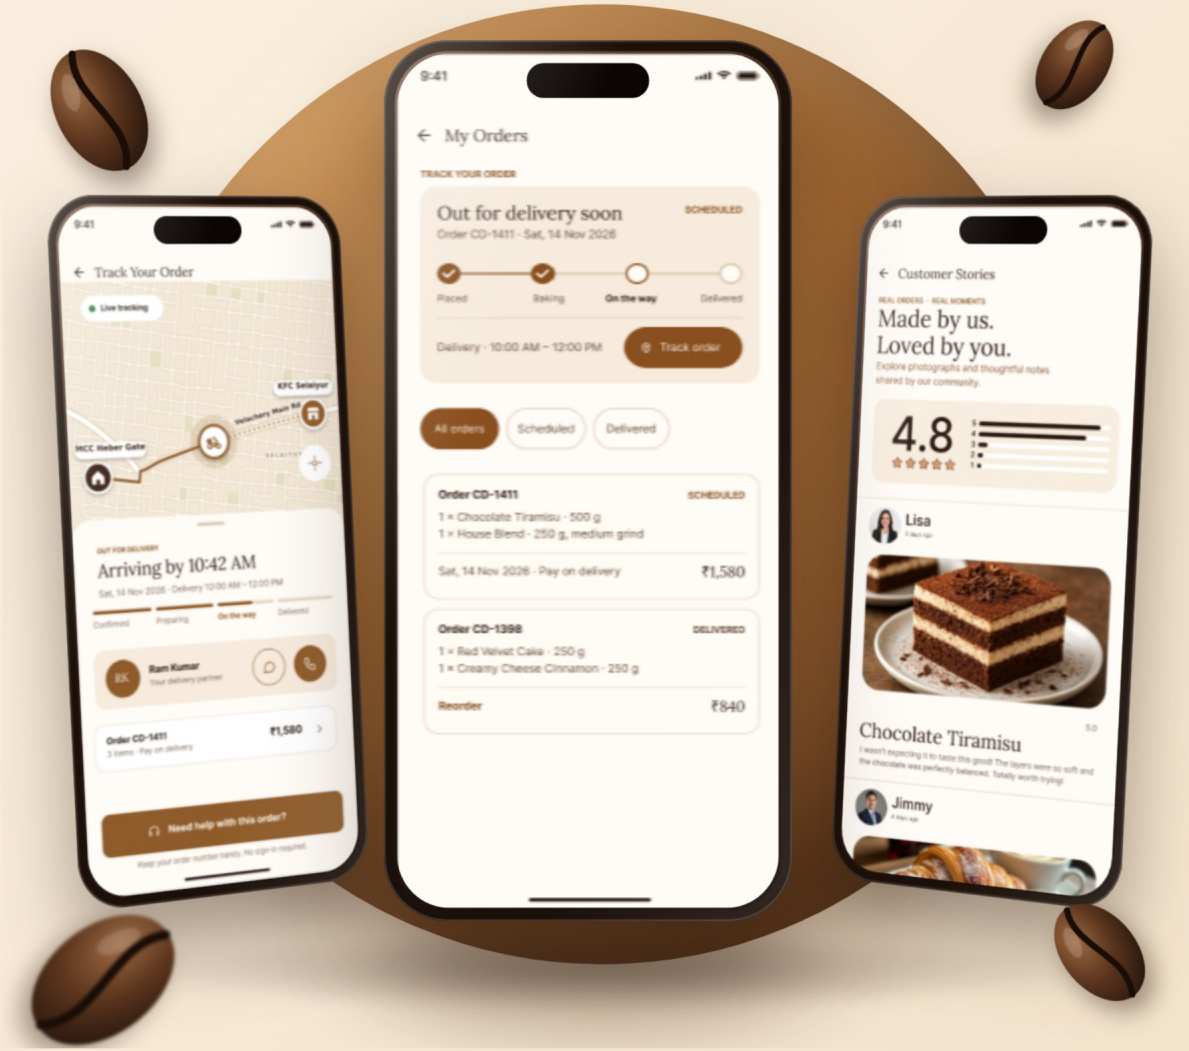

Always know where your order is

Three screens keep customers informed after they pay.

Track order Live status from accepted to delivered.

My orders Past orders in one tidy list.

Customer stories Real reviews build trust.

12 · TEST AND NEXT STEPS

Test, refine, launch

Seven usability tasks come next, followed by refinements.

Usability tasks Find, add, enter details, review, confirm, track, reorder.

Next features Favourites, loyalty, live map and a staff dashboard.

Roadmap Test, refine, hand off, build, launch, improve.

COFFEE DAY · UX/UI CASE STUDY

Thank you

Good coffee, good day.
